

ABSTRACT OF THE DISCLOSURE

5 A post attachment device for connecting a helmet  
to a head and neck support. The device includes a post  
anchor having a base, a button, a resilient member, a post,  
a retainer and a catch having a slot with a larger first  
section connected by a channel to a smaller second section.  
The button is positioned in an indentation in the base with  
the resilient member positioned therebetween. The post  
extends through the button, the base and the helmet. The  
10 retainer is secured on the post adjacent the inner surface  
of the helmet. To secure the post attachment device, the  
catch is orientated over the post. The button is then  
depressed into the base while the catch is moved backwards  
to move the post into the second section of the slot.
